

Sprint Planning

A **Sprint** is a fixed period during which a developer completes a set of planned tasks.

An **Epic** is a major feature that is too large to complete in a single sprint. It is divided into multiple **User Stories**.

A **User Story** is a small functional requirement that contributes to completing an Epic.

A **Story Point** estimates the effort required to complete a User Story using the Fibonacci sequence (1, 2, 3, 5).

Story Point Estimation

Story Point Complexity

1	Very Easy Task
2	Easy Task
3	Moderate Task
5	Difficult Task

Sprint 1

Epic 1 – Application Setup

User Story Description		Story Point
USN-1	Create Scoped Application	2
USN-2	Create Service Catalog Item (Laptop Request)	3

Epic 2 – Catalog Form Development

User Story Description		Story Point
USN-3	Create Catalog Variables	3
USN-4	Configure Mandatory Fields	2
USN-5	Configure Catalog Item Properties	2

Total Story Points in Sprint 1

$= 2 + 3 + 3 + 2 + 2 = 12$ Story Points

Sprint 2

Epic 3 – Workflow Automation

User Story Description	Story Point
USN-6 Design Flow in Flow Designer	5
USN-7 Configure Manager Approval	3
USN-8 Create Catalog Task Automatically	3

Epic 4 – Notifications

User Story Description	Story Point
USN-9 Configure Email Notifications	2

Epic 5 – Testing & Deployment

User Story Description	Story Point
USN-10 Test Complete Workflow	3
USN-11 Fix Issues and Activate Flow	4

Total Story Points in Sprint 2

= 5 + 3 + 3 + 2 + 3 + 4

= 20 Story Points

Total Story Points

Sprint Story Points

Sprint 1 12

Sprint 2 20

Total 32

Velocity Calculation

Formula

$$\text{Velocity} = \frac{\text{Total Story Points Completed}}{\text{Number of Sprints}}$$

Calculation

$$\text{Total Story Points} = 12 + 20 = 32$$

$$\text{Number of Sprints} = 2$$

$$\text{Velocity} = 32 \div 2 = 16 \text{ Story Points per Sprint}$$

Final Result

$$\text{Sprint 1} = 12 \text{ Story Points}$$

$$\text{Sprint 2} = 20 \text{ Story Points}$$

$$\text{Total Story Points} = 32$$

$$\text{Velocity} = 16 \text{ Story Points per Sprint}$$
