Roll Number	23A51A42B1
Project Name	Laptop Automation Request using ServiceNow
Maximum Marks	2 Marks

The Problem–Solution Fit

The Laptop Request Process project focuses on addressing the challenges faced by employees, managers, and administrators during laptop procurement and allocation within an organization. In many organizations, laptop requests are handled through emails, phone calls, spreadsheets, or manual paperwork, which often leads to delays, lack of transparency, approval bottlenecks, and poor tracking of request status.

The proposed solution uses the ServiceNow platform to automate the complete laptop request lifecycle. Employees can submit requests through the Service Catalog, managers can approve or reject requests through an automated workflow, records are created automatically, and notifications are sent to relevant stakeholders. This reduces manual effort and improves process efficiency.

Purpose

1. Solve customer problems effectively

- Eliminate manual handling of laptop requests.
- Reduce delays in approval and processing.
- Improve visibility into request status.

2. Increase solution adoption

- Provide a simple self-service portal for employees.
- Enable automated workflows through ServiceNow.
- Ensure users can easily submit and monitor requests.

3. Improve communication

- Send automated notifications for request submission, approval, and completion.
- Keep employees and managers informed throughout the process.

4. Build trust and transparency

- Provide a standardized request process.
- Maintain accurate request records and approval history.

- Reduce dependency on emails and manual follow-ups.

5. Understand and improve the existing situation

• Existing Process:

- o Laptop requests are managed manually.
- o Approvals are handled through email communication.
- o Tracking request progress is difficult.
- o Status updates are not always available.

• Improved Process:

- o Employees submit requests through ServiceNow Service Catalog.
- o Requests are automatically routed for approval.
- o Records are created and maintained automatically.
- o Notifications are sent at each stage of the workflow.
- o Request progress is transparent and traceable.

Problem – Solution Fit Template

Project Title: Laptop Request Automation in ServiceNow
Prepared By: Sonapuram Ekshita

Date: 29 June 2026
Version: 1.0

PURPOSE

- Automate the complete laptop request process using ServiceNow.
- Eliminate manual request handling through emails and spreadsheets.
- Speed up manager approvals using automated workflows.
- Improve transparency with real-time request tracking.
- Reduce manual workload for the IT support team.
- Increase employee satisfaction through faster service delivery.
- Standardize the hardware request process across the organization.

1. PROBLEM

1.1 Customer Segment

- Employees requesting laptops for office work.
- Managers responsible for approving requests.
- IT Support Team handling laptop allocation.
- System Administrators managing workflows.
- Organization's IT Department.

1.2 Problem Statement

Organizations often process laptop requests manually through emails, phone calls, or spreadsheets. These manual processes lead to approval delays, poor request tracking, duplicate requests, communication gaps, and increased workload for the IT department. Employees also have limited visibility into the request status.

1.3 Current Impact

- Delayed laptop allocation.
- Slow manager approvals.
- Increased manual work for IT staff.
- Duplicate and missing requests.
- Lack of transparency.
- Poor communication.
- Reduced employee productivity.
- Higher request processing time.

1.4 Existing Alternatives

- Email-based requests.
- Phone calls.
- Excel spreadsheets.
- Paper forms.
- Manual approval process.

Why they are not sufficient

- Time-consuming.
- Difficult to monitor.
- No centralized tracking.
- Higher chance of human errors.
- No automated notifications.
- Difficult to generate reports.

1.5 Root Cause

- Absence of workflow automation.
- Manual approval routing.
- No centralized Service Catalog.
- Lack of request tracking.
- Manual IT task assignment.
- No automated email notifications.

2. SOLUTION

2.1 Proposed Solution

Develop a Laptop Request Automation System using the ServiceNow platform. Employees submit requests through the Service Catalog by entering laptop details and business justification. The request is automatically routed to the manager for approval. After approval, the system creates a Catalog Task for the IT team, sends email notifications, updates request status, and completes the workflow automatically.

2.2 Key Features

- Laptop Request Catalog Item.
- Service Catalog Variables.
- Flow Designer Workflow.
- Manager Approval.
- Automatic Catalog Task Creation.
- Email Notifications.
- Request Status Tracking.
- IT Fulfillment Automation.
- Real-Time Workflow Monitoring.
- Standardized Request Process.

2.3 Benefits to Customer

- Faster request submission.
- Quick manager approvals.
- Reduced manual effort.
- Transparent request tracking.
- Automatic IT task assignment.
- Better communication.
- Improved employee satisfaction.
- Higher operational efficiency.
- Reduced processing time.
- Better record management.

2.4 Unique Value

- Built entirely on ServiceNow.
- Low-code workflow automation.
- Fully automated approval process.
- Real-time request tracking.
- Integrated email notifications.
- Easy customization.
- Scalable architecture.
- Standard ITSM best practices.
- Reduced human intervention.
- Improved governance and compliance.

2.5 Success Measures

- Reduced request processing time.
- Faster manager approvals.
- Increased automation.
- Reduced manual workload.
- Successful Catalog Task creation.
- Accurate email notifications.
- Improved employee satisfaction.
- Better workflow execution.
- Higher transparency.
- Fewer processing errors.

3. EVIDENCE OF FIT

Evidence Type	Description	Source / Method	Key Findings
Employee Feedback	Employees requested faster laptop allocation	User discussions	Need for an automated request system
IT Team Observation	Manual approval delays	IT Support Team	Workflow automation required
Prototype Testing	Tested Laptop Request Flow in ServiceNow	Workflow Studio	Approval, Catalog Task, and Email executed successfully
Existing Process Analysis	Compared manual and automated workflows	Current organizational process	Automation significantly reduces processing time
Workflow Execution Logs	Flow execution monitored after testing	Flow Designer	All actions executed successfully without errors
