

Project Design Phase Proposed Solution Template

Date	29 June 2026
Roll Number	23A51A42B1
Project Name	Laptop Request Automation using ServiceNow
Maximum Marks	2 Marks

Proposed Solution

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Many organizations still manage laptop requests manually through emails, spreadsheets, or verbal communication. This results in delayed approvals, poor request tracking, duplicate requests, lack of transparency, increased workload for the IT department, and difficulty in monitoring request status. An automated solution is required to streamline the complete laptop request lifecycle.
2	Idea / Solution Description	The proposed solution is a Laptop Request Automation System developed using the ServiceNow platform. Employees submit laptop requests through the Service Catalog by providing the purpose, laptop type, manager, and business justification. The request is automatically routed for manager approval using Flow Designer. Once approved, a Catalog Task is generated for the IT team, email notifications are sent at each stage, and the request is tracked until laptop delivery and closure. This eliminates manual intervention and improves efficiency.
3	Novelty / Uniqueness	The project leverages ServiceNow's low-code automation capabilities to integrate Service Catalog, Catalog Variables, Flow Designer, Approval Engine, Catalog Tasks, and Email Notifications into a single automated workflow. The system provides real-time request tracking, automated approvals, standardized fulfillment, and improved transparency while minimizing human errors and manual effort.
4	Social Impact / Customer Satisfaction	The solution improves employee satisfaction by providing a simple self-service portal for laptop requests. Automated approvals reduce waiting time, real-time status tracking increases transparency, and email notifications keep users informed throughout the process. IT administrators benefit from reduced manual workload, standardized request handling, and faster service delivery, resulting in improved productivity across the organization.
5	Business Model (Revenue Model)	This solution is designed for enterprise IT Service Management (ITSM). Organizations using ServiceNow can deploy this workflow internally to automate hardware request management and reduce operational costs. ServiceNow implementation partners and consulting companies can customize, deploy, and maintain this solution for clients as part of their digital transformation and IT automation services.
6	Scalability of the Solution	The solution is highly scalable and can be extended to automate requests for desktops, monitors, printers, software installations, mobile devices, accessories, and other IT assets. Additional approval levels, SLA management, inventory integration, asset management, dashboards, AI-based recommendations, and reporting features can be incorporated without redesigning the core workflow, making it suitable for organizations of any size.
