

Project Design Phase

Date	29 June 2026
Roll no	23A51A42B1
Project Name	Laptop Request Automation in ServiceNow
Maximum Marks	4 Marks

Solution Architecture

Solution architecture is a process that connects business requirements with technology solutions. In the **Laptop Request Process**, ServiceNow is used to automate laptop request submission, approval, record creation, and notification activities. The architecture helps employees submit requests through the Service Catalog, managers approve requests, and the system automatically creates records and sends notifications using Flow Designer. This solution improves efficiency, reduces manual effort, and provides a structured process for managing laptop requests.
